STEAM Filter Cartridges

- steam filters
- 316L stainless steel

Steam is an often neglected part of a process, regarded as an add on to a customers liquid or gas filtration needs.

It has however, large specific applications in its own right and should be treated with the same level of importance as air, gas and liquid systems if long filter lifetimes and system cost effectiveness are to be achieved.

The quality of steam used within the food and dairy industries has been raised higher on the agenda in an ever increasing number of companies. Minimum acceptable standards are now being quoted on a more regular basis with particular reference to 'culinary grade' steam. Steam serves several purposes in the food & beverage industry. It is critical that this steam is of a high quality to ensure effective and continuous operation of the process.

Features and Benefits

- 316L stainless steel filter cartridges
- Exceptionally high flow rates
- Available in culinary grade 1 micron
- High dirt holding capacity
- 'JUMBO' filter configuration ensures maximum utilization of pipework capacity

Which Filter for Which Application?

Process Steam

- Direct from boiler
- No direct contact with product being manufactured

Applications

- · General heating
- · Steam jackets
- Bio waste kill systems

Cartridges

Required if steam is used to sterilize liquid and gas cartridge filters

Sintered 25 μm (Selection Criteria)

Use for relatively low flow rates

Pleated 5 µm

(Selection Criteria)

High flow rate and dirt holding capacity

Culinary Steam (3A Standard 609-03)

- 95% retention of >2 micron particles in the liquid
- Manufactured from 300 series stainless steel
- Any additives to the boiler feed should conform to CFR Title 21, Chapter 1, Part 173, Section 173.310

Applications

- · Used in direct contact with food
- Direct contact with food processing equipment and HVAC systems

Cartridges

Selection dependant on flow parameters

Sintered 1 µm

Use for relatively low flow rates

Pleated 1 µm

(Selection Criteria)

Used to maximize steam capacity of pipe

JUMBO Filters

Highest available capacity

Clean Steam (HTM 2031:1997)*

Condensate to WFI standards

Applications

- Pharmaceutical products
- Pharmaceutical plant HVAC systems

Cartridges

For removal of magnetite particles generated from stainless steel pipes due to corrosive purity of steam

HIGH FLOW TETPOR II

(Selection Criteria)

PTFE membrane 100% removal of magetite particles generated from stainless steel pipes

Culinary 1µm (Selection Criteria)

To conform to HTM 2031 Point of Use filter rated at <5 μm

Specifications - PLEATED

Materials of Construction

Filtration Media: 316L Stainless Steel
Inner Support Core: 316L Stainless Steel
Outer Support Cage: 316L Stainless Steel
End Caps: 316L Stainless Steel

Standard o-rings/gaskets: EPDM (standard)

Silicone and Viton (options available)

Recommended Operating Conditions

The maximum differential pressure in direction of flow (outside to in) is 10 barg (145.03 psig).

The maximum differential pressure in direction of flow (in to outside) is 2 barg (29.00 psig).

The maximum recommended continuous operating temperature range is -75 °C (-103 °F) to +200 °C (392 °F).

Note: Temperature dependant on o-ring compound

Effective Filtration Area (EFA)

10" (250 mm) 0.15 m² (1.61 ft²)

Housing Materials of Construction

Material: 316L Stainless Steel

Surface Finish

Single Internal: Electropolished Ra 0.8
Single External: Mechanical Polish

(Commercial Bright)

Upstream - Beadblast Outlet Assembly -

Linished 180 grit

Jumbo External: Beadblast

Vent / Drain

Jumbo Internal:

Single / Jumbo: 1/4" BSPP Female Thread

Seal Material: EPDM Aseptic Seal

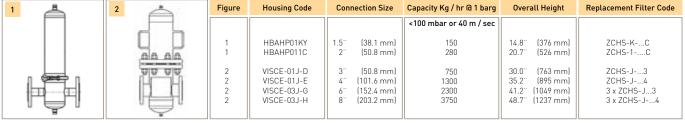

Housing Design Pressure and Temperature

Single: 16 barg (232 psig)

@ 200 °C (392 °F)

Jumbo: 7 barg (101 psig)

@ 170 °C (338 °F)

Note: For efficient steam distribution it is recommended that steam velocities are restricted to 25 m / sec-1. For more information on the HBA range, please contact Parker domnick hunter.

Correction Factors

To use the table above, the steam flow rates must be at 1 barg [14.50 psig]. For system flows at different line pressures, divide the system flow by the correction factor below to find the equivalent flow @ 1 barg [14.50 psig].

St	eam Pressure	0	1	2	3	4	5	6	7	8	9	10
	Correction Factor		1.0	1.5	2.0	2.5	3.0	3.5	4.0	4.5	5.0	5.5

Table showing the relative system size difference between pleated cartridges left and sintered cartridges right.
