

BEVPOR PS beer filters protect the unique characteristics of beer by removing yeast and other spoilage organisms to ensure microbial stability during cold stabilization.

The inert and highly asymmetric PES membrane provides validated microbial retention to typical spoilage organisms, whilst protecting the beer's organoleptic qualities to preserve a fresh taste and a long shelf-life once packaged. Combined with hydrophilic properties for easy integrity testing, BEVPOR PS filters provide assured performance throughout their service life.

BEVPOR PS filters have been designed to provide a cost effective solution to beer stabilization by providing increased process control with increased operational efficiency.

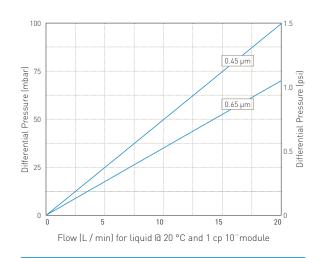

# Features

- I Validated retention to spoilage organisms
- Inert material of construction
- Easily integrity tested in-situ

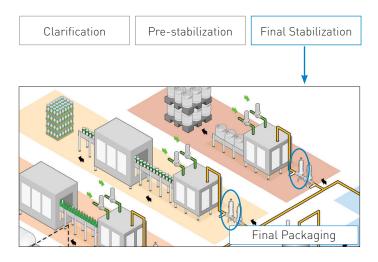

## Benefits

- I Ensures effective microbial stabilization of beer
- Preserves the organoleptic qualities of the beer
- Assured filtration performance

# Specifications

### Materials of Construction

olyethersulphone
Polyester
Polyester
olypropylene
olypropylene
lylon
16L Stainless Steel
ilicone / EPDM
) ) ) )

### Food Contact Compliance

Materials conform to the relevant

requirements of FDA 21 CFR Part 177, current EC1935 / 2004 and current USP Plastics Class VI - 121 °C.

### Recommended Operating Conditions

Up to 70 °C (158 °F) continuous operating temperature and higher short-term temperatures during CIP to the following limits:

Temperature		Max Fo	orward dP
°C	°F	(bar)	(psi)
20	68	5.0	72.5
40	104	4.0	58.0
60	140	3.0	43.5
80	176	2.0	29.0
90	194	1.0	14.5
>100 (steam)	>212 (steam)	0.3	4.0

### Effective Filtration Area (EFA)

10" (250 mm) Up to 0.6 m<sup>2</sup> (6.45 ft<sup>2</sup>)

### Cleaning and Sterilization

BEVPOR PS cartridges can be repeatedly steam sterilized in-situ or autoclaved at up to 130 °C (266 °F). They can be sanitized with hot water at up to 90 °C (194 °F) and are compatible with a wide range of chemicals. Please refer to our Clean-in-Place support guide or contact your local Parker representative for more information.

### **Retention Characteristics**

The retention characteristics of BEVPOR PS filters have been validated by challenges performed with the following organisms.

Organism	LRV when challenged with a minimum of 10 <sup>7</sup> cfu per cm <sup>2</sup>		
		0.45	0.65
Saccharomyces o Brettanomyces b Lactobacillus bre Acetobacter oeni Pseudomonas ae Serratia marceso	ruxellensis evis pruginosa	FR FR FR 9.1 FR	FR FR FR 8.9 FR

#### \*FR - Fully retentive during challenge

When expressed as titre reduction "FR" equates to >10" per 10" module.

### Integrity Test Data

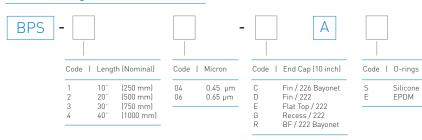

All filters are flushed with pharmaceutical grade purified water prior to despatch. They are integrity tested to the following limits:

Diffusional Flow	Micron Rating	
Test Parameters	0.45	0.65
Test Pressure (barg) Test Pressure (psig) Max Diffusional	1.4 20.0	1.0 15.0
Flow per 10" (ml /min)	16.0	16.0

### Manufacturing Traceability

Each filter cartridge displays the product name, product code and lot number. Additionally, each module displays a unique serial number providing full manufacturing traceability.

# Ordering information

Parker domnick hunter has a continuous policy of product development and although the Company reserves the right to change specifications, it altempts to keep customers informed of any alterations. This publication is for general information only and customers are requested to contact our Process Filtration Sales Department for detailed information and advice on a products suitability for specific applications. All products are sold subject to the company's standard conditions of sale.
